# VicAgents™

## Autonomous AI agents for high-effort finance tasks

Finance teams are handling more than ever, but headcount hasn't kept up. Contracts go unchecked, invoice exceptions pile up, and AP inboxes overflow — not from lack of skill, but because manual work adds up fast.

**DIESEL DIRECT**  
Supply. Delivery. Management.

**Associa**

**ORGILL**

**Offerpad**

**H&S**

VicAgents™ are autonomous, task-specific AI agents trained to take on that work — continuously, accurately, and without human follow-up. They operate inside your existing AP and spend management workflows to handle high-effort processes with precision and autonomy. Think of them as your finance team's always-on support staff. Orchestrated by Victoria™, the AI core that powers the Vic.ai platform.

## Empower your team to manage more, with less

VicAgents™ deliver real-time decision support through natural-language questions and context-aware answers pulled from live AP and ERP data — helping finance teams spot missed discounts, surface key metrics, and make smarter, faster decisions.

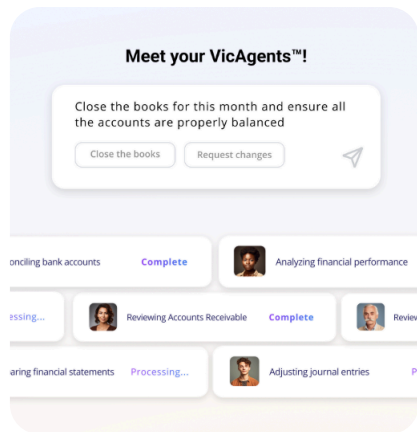

- **Handle the work your team can't get to:** Analyze contracts, monitor compliance, and reconcile invoices — automatically and effortlessly.
- **Eliminate the everyday effort:** Let VicAgents™ triage your inbox, flag issues, and deliver action-ready insights.
- **Reclaim time for strategic finance:** When tasks run autonomously, your team can focus on cash flow, forecasting, and strategy.
- **Scalable intelligence:** Each agent is fine-tuned to handle a specific finance function and improves over time — meaning smarter insights with every interaction.

# How it works: Agentic AI in action

VicAgents™ execute what we call *Agentic Tasks* — the structured, repeatable work your team does every day, such as:

- Reviewing vendor contracts for compliance gaps
- Matching invoices against SOWs and payment terms
- Triaging and responding to payment inquiries
- Identifying underused early payment discount opportunities
- Flagging policy violations before they hit your audit trail
- Monitoring freight and tax handling across invoices

Interacting with your VicAgents™ is easy: just type a question directly into the Vic.ai platform, no report builder or BI tool required. The agent queries Vic.ai's analytics layer and returns the most relevant response: a metric, a chart, or even a recommended action.

## Delegate. Automate. Elevate.

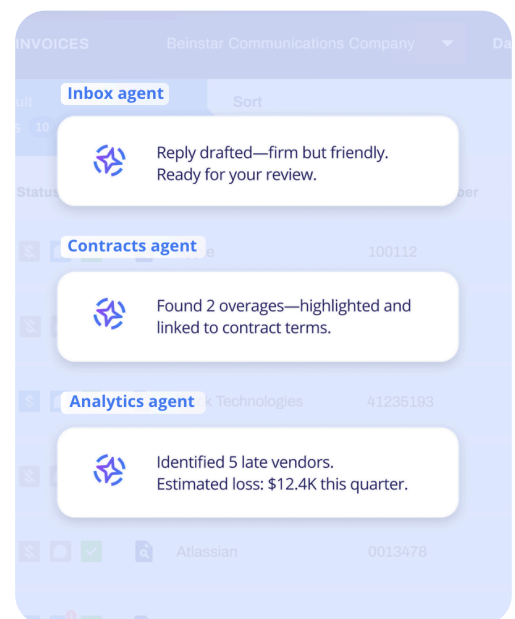

VicAgents™ empower finance teams to spend less time answering questions and more time shaping strategy. They are:

**Proactive:** Surfacing insights before you ask

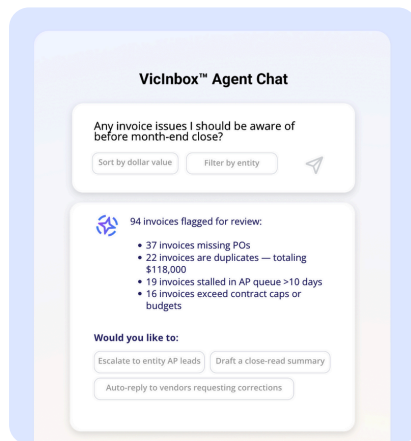

**Focused:** Designed to master a narrow domain

**Integrated:** Inside the Vic.ai platform, ready to act

**Evolving:** Learning and improving with every interaction

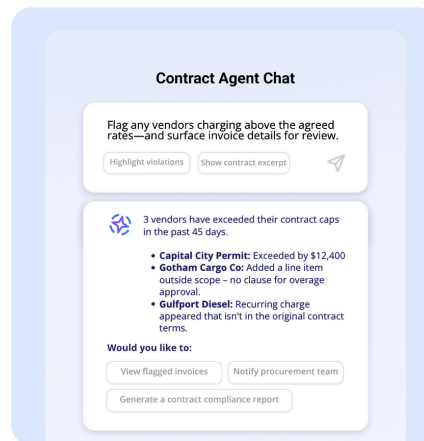

# VicAgents™ in use, today

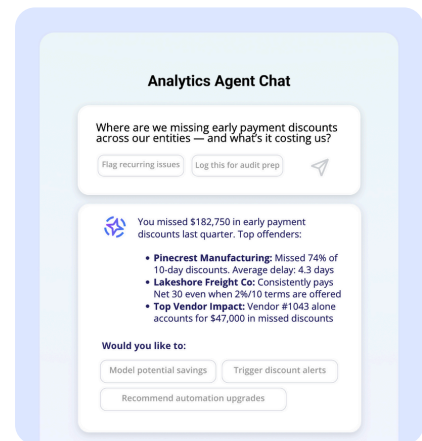

## VicInbox™ (Now live):

Automatically categorizes, routes, and drafts to AP vendor emails using live data from your ERP, Vic.ai, and invoice workflows. More organization, faster replies.

## Contracts Agent (In beta):

Extracts key terms from vendor agreements, monitors invoice and payment activity for violations, and flags discrepancies in real time.

## Analytics Agent (In beta):

Answers common finance questions using Vic.ai data, and provides dynamic charts and summaries. Save recurring queries for even more efficiency.

VicAgents™ are orchestrated by Victoria™, the autonomous AI core powering the Vic.ai platform. Imagine:

- **A Cash Flow Agent** that monitors liquidity, flags variances, and recommends timing for large payments.
- **A Payment Optimization Agent** that analyzes payment patterns and surfaces opportunities for cash savings and discounts.
- **A Compliance Agent** that audits workflows and flags anomalies in real time.

In the near future, a Vic.ai dashboard will serve as the command center for agents — with pre-built templates, custom instructions, and integration across your full monthly workflow.
