LARGE US DISTRIBUTION COMPANY

The AP team at one of the nation’s largest distribution companies struggled with their template-driven AP automation vendor. The templates constantly broke anytime an invoice layout changed, and approvals were completely manual. These time-consuming tasks and broken processes also contributed to employee turnover.

They needed a solution that would dynamically adjust to different invoice layouts and changes, and simplify approval flows. This solution also needed to integrate seamlessly with their ERP, Microsoft Great Plains.

With Vic.ai, they are now able to process a majority of their invoices autonomously, across 11 different entities. They were able to go from an average of 2.3 minutes per invoice to just 36 seconds – which accumulates to an estimated 11,333 hours saved over the course of a year.

Vic.ai’s high accuracy rates, combined with time savings, means the AP team can now shift their focus to support business growth and the company mission of delivering high-quality products and services, on time.
